Given the graph and CPTs (15 runs, 5 folds)
single do(), unseen graphs
single conditioning, unseen graphs
two interventions combined
two conditions combined
pass threshold
0.0
0.2
0.4
0.6
0.8
1.0
gap closed (1 = exact answer)
More capacity does not fix it
gap closed, two conditions
two conditions combined
10^0
10^1
model parameters (millions)
