Conditioning on two variables at once
Two-element training, graph + samples
Graph + CPT values (E2-0)
one conditioning variable
two variables, as pre-registered
two variables, + two-element training
Graph + 128 samples (E2-full)
one conditioning variable
two variables, as pre-registered
two variables, 0.8M / 14M-parameter models
two variables, + two-element training, stopped at 36–38k
two variables, + two-element training, 240k steps (5 folds)
10^{-3}
10^{-2}
10^{-1}
KL to the exact Bayes answer, unseen graphs (bits; one dot per run)
stopped by the plateau rule (36–38k)
fold 1
two variables
one variable (what the stopping rule watched)
KL to exact Bayes, unseen graphs (bits)
10^{-1}
10^{-2}
10^{-3}
